

Testing Assignment Overview

In this assignment, you'll be doing manual testing. You'll use your testing skills to find and report all the possible issues in the proper way.

Assessment Instructions

Website UI Testing

- Test the homepage of this website (<https://lethaldemo.com/digct/>) and make sure the website is the same as per design.
- Original design available here - [See JPEG version](#) or [See PDF Version](#)
- Find out all the issues and provide a detailed report with screenshots, clearly outlining the issues and how to reproduce them, so it can help the development team quickly identify and resolve.
- Testing Focus:
 - o Verify that the website is **pixel perfect** as per design such as alignment, spacing, matching colors etc.
 - o Verify that all the links, buttons, and the contact form are working.
 - o Verify that the website is **responsive across** different screen sizes and devices.
 - o Check if the website is compatible with different browsers and platforms.
 - o If you have any improvements or suggestions, you can also include that.

Issue Reporting

- List all the issues in **Google Docs or Sheets** (not necessary to use third-party tools like Jira, BugZilla).

Submission Guidelines

- Share the link of your document while you submit the application form.
Make sure that the shared document is [accessible publicly](#), if the document is not publicly accessible then your application will be rejected.

Note

Candidates who can identify and report more real issues will have a higher chance of being considered.
